

## Ultralight harness "String" & reversible "String RS"

**String** is an ultralight harness for pilots from 160 to 180cm. Its low weight of only 350g (without carabiners) makes it the lightest available harness certified according to EN/LTF for up to 100kg.

The optional LTF certified airbag protector and the front container is the lightest available harness and rescue combination.

As pilots we don't need to walk up the hill with a handbag, just because the equipment became so light and dense! String now is available with a rucksack, too. **String RS** is good looking and everything fits in there: Sir Edmund, reserve, instruments and helmet. There are straps attached to the Rucksack, holding the hiking poles during flight.
