

Reinhold II

The alpinist amongst paragliders

Being neither speed glider nor normal paraglider, Reinhold II is something very special amongst the SKYMAN paragliders.

Its canopy with 15,7m² surface area is a bit larger than a speed glider canopy and has been construed on the basis of parachute canopies. SKYMAN thus developed a fast glider with outstanding handling - an ideal companion for alpine adventures.

Almost needless to say: Reinhold II is one of Skyman Markus Gründhammer's favourite paragliders. Starting from alpine peaks and at wind speed of up to 60km/h he always relies on Reinhold II.
